

Data 8, Lab 3

Data Types and Table Manipulation

Hubert Luo
Spring 2020

7 February 2020

.column() vs .select()

- Functions that take in a table and output some values
- `tbl.column("column name")` or `tbl.column(column number)`
 - Table -> array of values
- `tbl.select("column name")` or `tbl.select(column number)`
 - Table -> copy of table with only some columns
 - Can put in multiple column names or multiple column numbers
